Making iLife '09 Slideshows

With iLife '09 you can instantly create stunning slideshows with animated titles and multiphoto layouts.

A great way to show off your photos onscreen is with a slideshow. iPhoto '09 brings photos to life with six themes that let you create beautiful slideshows in seconds. Slideshow themes include Classic, Shatter, Snapshots, Scrapbook, Ken Burns, and Sliding Panels. Every slideshow uses face detection to position photos correctly and keep the faces onscreen.

Want to skip ahead or go back to a slide you liked? A filmstrip at the bottom of the screen lets you navigate your slides with a click. You can also change the music or adjust the speed to go better with your photos. When you're happy with your slideshow, you can export it as a movie to iTunes and view it on your iPod, iPhone, or Apple TV.

Importing Audio Books into Your iPod

Important when importing Audiobooks from your purchased book set. Setup iTunes for proper importing. Skipping this will cause many headaches and reimporting of your books for syncing to your iPod.

Use the handout to help follow the process. Thanks to Mac World for this information.
